Mobile App Development Services

BPO Services and Oversees Services

Support Services and IT Helpdesk Services

WEBSITE DEVELOPMENT

Web development encompasses a wide range of services, which include delivering websites or web apps, cybersecurity solutions, UX/UI design, e-commerce solutions, website architectures, QA testing, maintenance, consulting, and even a custom CMS.

DOCUMENT MANAGEMENT SYSTEM-DMS

The document management system manages your document-related transactions in a manner that increases security and productivity. DMS automates the tracking and managing of permanent and current source documents from receiving to storing and sharing. DMS is well equipped with tools, and methods used to capture, manage, store, preserve, deliver, and dispose of 'documents' across an enterprise.

The proposed system works as a library, and allows you to store all your documents in digital format. A digital library works as a hub that allows your employees to refer documents for assigned projects. They are assigned to from anywhere and at any time to help streamline day-to-day operations.

APPLICATION GATHERING SYSTEM

Introducing the JobArcade Application Gathering System, a cutting-edge platform that simplifies job application management for both employers and job seekers. With features like effortless application submission, real-time tracking, and customized forms, it enhances the process for employers and provides a user-friendly experience for job seekers.

JobArcade streamlines communication, offering a secure and efficient solution to connect top talent with the perfect opportunities. Your journey to efficient job application management starts here.

FOREIGN EMPLOYMENT AGENCY SYSTEM

The Foreign Employment Agency System offers a streamlined platform for job seekers seeking international career opportunities. With a vast database of global job listings, it simplifies overseas job applications, provides application tracking, manages crucial documents, offers pre-departure resources, and ensures data security.

Whether you're pursuing work abroad, this application is your trusted partner to turn your dreams into reality, irrespective of the foreign employment company you choose. Your international career journey begins here.

REGISTRATION SYSTEM

The Registration Portal is a user-friendly web platform where users can register and submit job requests, Also the administrators can easily review, accept, deny, or set requests to pending status. Users can track the status of their requests via a personal dashboard. This system simplifies communication and enhances efficiency, making it an excellent choice for organizations looking to streamline their job request processes

POS SYSTEM

One of the main functions of a POS system is to record transactions that your store made. Recording sales transactions quickly in your system is very important when waiting lines are growing, so having a software that allows scanning and selling products without wasting time is beneficial for a retail business.

Our POS system features are dynamic dashboard with real-time insights, product management, easy quotation creation and management, sales and purchases, any type of reports.

INVENTORY MANAGEMENT SYSTEM

Inventory management system for tracking inventory levels, orders, sales and deliveries. It can also be used in the manufacturing industry to create a work order, bill of materials and other production-related documents. Special feature is credit bill and reminder system with mail.

ONLINE ORDERING SYSTEM

This web-based ordering system, built with React.js, Node.js, and MongoDB, streamlines order processing. Users can easily browse and order items, with secure payment gateways. An owner's dashboard offers order management and fulfillment tools, with SMS order updates. Shop owners gain inventory control, report generation, and KOT and full bills, enhancing business insights.

This system combines modern e-commerce convenience with efficient order and inventory management, ensuring a seamless experience for users and business efficiency.

TRAVEL & TOURISM SYSTEM

The Sri Lankan Travel & Tourism System Development project aims to create a dynamic and user-friendly online platform that promotes Sri Lankan tourism. The website will serve as a comprehensive guide for tourists, providing detailed information about Sri Lankan tourist destinations, hotels, and cultural experiences. It will also facilitate the booking of travel packages, both predefined and customizable, offering customers a seamless and personalized travel planning experience.

SMART TOURISM SYSTEM   LOW COST FLIGHTS   BOUTIQUE HOTEL

CLOUD SIGNAGE SOLUTION

Software-enabled digital signage allows you to create multiple content zones on the screen and easily schedule content for each zone. Additionally, it has override content features for interrupting routine content streaming with emergency alerts programmed from a remote location.
HOSPITAL MANAGEMENT SYSTEM

We provide technical and operational solutions to various categories of hospitals, channeling centers & professionals in the healthcare industry. With our deep domain knowledge and proven expertise in healthcare IT consulting services, we are developing innovative healthcare IT solutions leveraging latest technologies including Digital transformation, Artificial Intelligence, Mobility, Big Data, Analytics and Cloud Computing.

The Elements of Hospital Information Systems

1. PERSON MANAGEMENT SYSTEM (PMS)
2. PATIENT'S BILLING AND ACCOUNT RECEIVABLE (PBAR)
3. MEDICAL RECORD OFFICE (MRO) SYSTEM
4. CLINICAL INFORMATION SYSTEM (CIS)
5. LABORATORY INFORMATION SYSTEM (LIS)

7. PHARMACY INFORMATION SYSTEM (PHIS)
8. RADIOLOGY INFORMATION SYSTEM (RIS)
9. EXECUTIVE INFORMATION SYSTEM (EIS)
10. FORENSIC INFORMATION & MORTUARY MANAGEMENT SYSTEM (FIMMS)

Our portfolio of services, includes development, enhancement, integration as well as management of healthcare applications. We have deep understanding of the provider systems and the applicable regulatory compliance in the industry.

VEHICLE PARKING SYSTEM

Our innovative solution transforms parking at large venues with RFID cards, laser tracking, and image recognition. It addresses challenges like ticket duplication and inaccurate vehicle categorization. Objectives include precise categorization, enhanced verification, and reliable data. A central database and cloud-based monitoring offer secure, real-time insights. Our solution goes beyond tech upgrades, creating an efficient, user-friendly parking environment, setting a new industry standard.

VEHICLE TRACKING SYSTEM

In the fast-paced media industry, an efficient "Vehicle Tracking System" is essential. It offers real-time vehicle tracking, speed monitoring, and fuel consumption estimation. Our commitment is to enhance content delivery efficiency, safety, and reliability. Objectives include real-time tracking for efficient delivery, speed regulation for safety, and accurate fuel consumption estimation for cost control.

The system comprises GPS tracking, GSM communication, speed monitoring tools, and a centralized server. We follow a structured implementation process, encompassing requirement analysis, system design, hardware setup, software development, testing, deployment, and maintenance. The system promises safety, efficiency, cost control, accountability, viewer satisfaction, and a competitive edge, reflecting our dedication to innovation and excellence.
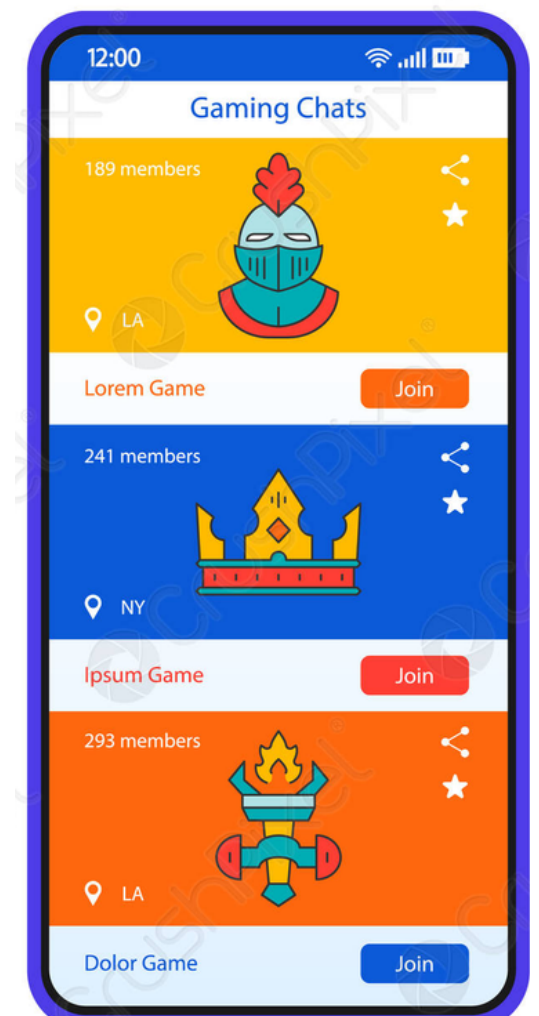

MOBILE APP DEVELOPMENT

Our Customized Mobile Application, powered by Flutter, JavaScript, and React and seamlessly integrated with Firebase and MongoDB, offers an exceptional user experience with support for both Android and iOS platforms. With cross-platform compatibility, a visually stunning interface, high levels of customization, real-time updates, and the security of Firebase, this app provides a seamless user experience. It ensures a scalable and offline-capable database, leverages community support, and delivers robust performance, all while offering dedicated support and maintenance to keep your app at its best.

MOBILE GAME DEVELOPMENT

This mobile game, developed with Flutter and Unity, is built on a simple yet engaging concept tailored to a broad audience, aligning perfectly with your promotional objectives. With intuitive presets and characters, it ensures easy user engagement without a steep learning curve, making it accessible to a wide player base. Its cross-platform compatibility maximizes reach across Android and iOS, while its customization options create a unique and immersive promotional experience. Leveraging Unity's scalability and integrated analytics tools, you can adapt and track performance to enhance future marketing efforts. This mobile game serves as a dynamic promotional asset, boosting brand visibility and audience engagement.

BPO SERVICES

BPO services we offer, are for organizations that require efficiency in service delivery focusing on cost and quality. Through our service we undertake to organize all administrative functions in order to assure optimal results. We are proud of our performance - driven culture that bases itself on measurement and feedback to cater to customers with an end-to-end process.

As Sri Lanka becomes a global hotspot for off-shore call center services, we are honored to provide 24x7 call center services for both onsite and offsite. Customer satisfaction is guaranteed with this unmatched state-of-the-art technology, as well as exceptionally trained staff.

- 24X7 Call Centers
- IT/Software Development
- Payroll Outsourcing
- Training & Recruitment (Foreign/Local)
- Quality Assurance
- Chat-Bot Solutions and customized software solutions

MANAGED SERVICES

Our skilled staff members are knowledgeable about programming languages and technologies and are experts at providing superior BPO and offshore services that cut across national borders. Their constant commitment and breadth of technical knowledge make us your perfect partner to negotiate the complex global market and smoothly incorporate offshore BPO solutions into your overall strategy.
